

ESEE Knives ESEE-6 Sheath

The ESEE-6 knife is held in place by a friction fit in the molded sheath. The knife is removed by gripping the knife handle with the fingers, then pushing the thumb against the sheath.

The sheath is fully ambidextrous. The lashing holes facilitate storing a length of 550 cord by wrapping around the sheath and through the open holes. The attached paracord can be used as a lanyard or threaded through the molded sheath to form a belt loop.

Note: Our knives are made from high carbon 1095 steel. And while 1095 is a top choice for professional cutlery designed for hard use, it will rust and stain if not properly cared for - especially on the cutting edge and around the laser engraving. It is the user's responsibility to keep the blades properly lubricated and cleaned. We suggest using a dry film rust inhibitor on the blade.

*INCLUDED IN THIS PACKAGE:

Molded Sheath, MOLLE Locks, Paracord, Cord Lock. Hardware: 4 ea. Screws, 4 ea. Rubber Washers, 4 ea. Barrel Nuts. Install MOLLE Locks With Rubber Washers Between MOLLE Locks And Molded Sheath

All of our knives are made in the USA with absolute attention to quality materials and care during the manufacturing process. We stand behind our knives with a 100% lifetime, unconditional guarantee. If your ESEE knife should ever fail we will repair or replace it. This warranty follows the knife throughout its life, anywhere in the world.
