IZULA KNIFE & SHEATH SYSTEM

Where did the IZULA name come from?

The locals in the jungles of the Amazon Basin call the meanest, nastiest ant of the forest by the name Isula. The Isula is known for its independence, aggressiveness, and its ability to survive. The IZULA knife is built the same way. The IZULA is designed to be the perfect lightweight survival kit or low-profile carry knife.

If you ordered the complete IZULA SYSTEM, your package includes: IZULA Knife, Black Molded Sheath, ParaCord, Split Rings, Ferro Fire Starting Rod, Emergency Whistle, Snap Hook, MOLLE Lock & Hardware.

If you ordered the standard IZULA package, your kit includes the IZULA knife and molded sheath only.

Note: Our knives are made from high carbon 1095 steel. And while 1095 is a top choice for professional cutlery designed for hard use, it will rust and stain if not properly cared for - especially on the cutting edge and around the laser engraving. It is the user's responsibility to keep the blades properly lubricated and cleaned. We suggest using a dry film rust inhibitor.
