HIGH TECH SPORTS PRODUCT MADE IN GERMANY

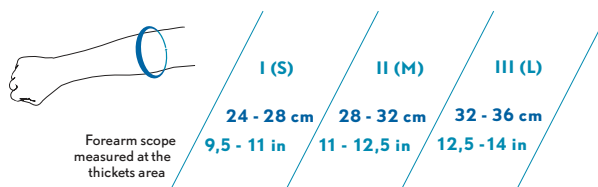

VERTICS has discovered and intensively tested the positive effect of forearm muscle compression. With an experienced partner for orthopedic-technical knitted products, we developed a forearm cuff, whose compression effect is exactly balanced to the muscular work of the forearms.

The effectiveness of VERTICS.Sleeves is based on medical findings. Compression bandages accelerate the blood supply and boost the oxygen transfer in the muscles which leads to an increase of the muscles' performance and a faster recovery.

VERTICS.SLEEVES ARE A HIGH CLASS FUNCTIONAL SPORTS PRODUCT WITH OPTIMAL PRODUCT FEATURES

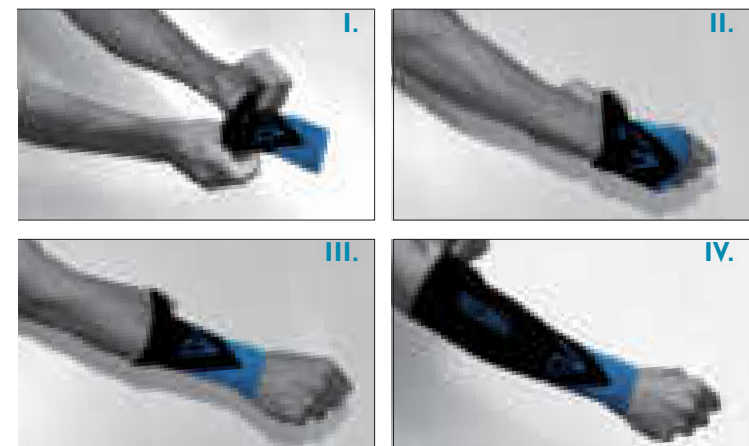

- Seamless knitting technique for big wearing comfort
- Double knitted seam area for long resistance
- Synthetic blended fabric for permanent elasticity and easy maintenance
- Compression diminishing towards the hand for increase of blood circulation
- Two different compression areas through knitting structure „Ripp“ and „Piqué“
- Environment friendly materials
- Latex free

VERTICS.Sleeves are available in three different sizes:

PUTTIN ON VERTICS.SLEEVES

You can put on the Sleeves best before the beginning of your training session and keep on all the time. Make sure that the material is applied evenly on the forearm with no wrinkles. If they are too long at the elbow, you can turn inside out the top border, or you can simply pull it over the elbows.

PUTTING OFF AND MAINTANANCE

Hold the sleeve tight at the top and pull it down the forearm inside out over the hand. You can clean the sleeves turned inside out by machine or hand wash at 40 degrees centigrade. Do not put on the heating or in the laundry dryer. The functional material dries very quickly.

VERTICS.Sleeves Materials

75% Polyamid, 25% Elasthan
